How Does it Work?

It's just a **single-time setup**, and the escalator is sanitized for no less than a year, with **no maintenance**.

To sanitize the escalator handrails, we use high UVC intensity light (50 mj/cm²) at high speeds (1.0 m/s). It causes direct damage to DNA and RNA, the genetic materials of bacteria and viruses, potentially preventing their spread. Escalator handrails are sanitized efficiently and environmentally friendly thanks to the physical sanitization process that uses UVC lighting technology. No work is required on new or existing escalators in the design of the external installation.

State-of-the-art **Sterilizing Unit!**

Brigid Innovation Products

Our innovative device is compatible with digital signage software and can be adjusted or modified to any escalator thanks to its patented auto-adjust chassis.

The device uses UVC as the method of sanitization instead of harmful chemicals, which may eventually lead to health issues if the fumes from them are inhaled.

LightWeight Design

Lightweight and simple design.

Efficient & Functional

Operates discreetly without disturbing traffic.

Trouble-free Installation

No need of mechanical operations for device installation.

Brigid Box Escalator Handrail Sanitizer ...

- **Effective sanitization** for escalator handrail, the most touched surface in public areas.
- **Simple, easy to install** on existing and new escalators.
- **Auto operation**, long lamp life 13,000 hrs.
- **High UV-C intensity** (50mj/cm2) at high speeds (1.0m/s)
- Installed **externally**, no modification or work on the escalator's body
- **Low power** consumption (< 235w).
- **Fits** most of the handrail sections and curvatures (F50-100 cm).

Introducing Escalator AdScreen!

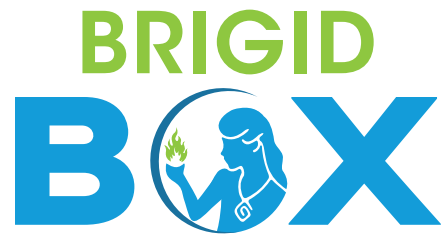

Our high-quality screens are built to **maximize the impact** of people's attention to content.

Showcasing **directions, gates, utilities, or even advertisements** across the screen inside the escalator, all controlled with just a click!

Brigid Box Escalator Handrail Sanitizer Plus ...

- **Effective sanitization** for escalator handrails, the most touched surface in public areas.
- **Simple, easy to install** on existing and new escalators.
- **Auto operation**, long lamp life 13,000 hours.
- **12.1"** display.
- **High UV-C intensity** (50mj/cm2) at high speeds (1.0m/s).
- **Externally** installed, no modification or work on the escalator's body is required.
- **Low power** consumption (< 235w).
- **Fits** most of the handrail sections and curvatures (F50-100 cm).
- Displays directions, gates, utilities OR can **display advertisements** commercially.
